As we understand that the Project is a step-by- step learning environment that closely simulates the class-room and Lab based learning environment into actual implementation. It is a project implementation at your fingertips!! An electronic, live juncture on the machine that allows you to.

- ✓ Practice step by step i.e. ladder approach.
- ✓ Build a larger more robust application.
- ✓ Usage of certain utilities in applications designed by user.
- ✓ Single program to unified code leading to a complete application.
- ✓ Learn implementation of concepts in a phased manner.
- ✓ Enhance skills and add value.
- ✓ Work on real life projects.
- ✓ Give a real life scenario and help to create applications more complicated and useful.
- ✓ Mentoring through email support.

We would like to send a great thank to our professor, Mr Le Thanh Nhan and others student for the adorable supports during the time in project.

Beside several mistakes we had made in the project, we hope to have more

opportunities to widen our knowledge in web developing world.

We also thank you so much for your information and the “demo” project from India APTECH to help us get more reality experience in this project. Since we have gained more experience from this project, we will not stop learning any thing as much as we can to be more successful in the future.

Your Sincerely,

Team Group 06.

Synopsis

The objective of this project is to develop a web-based Courier Management System named CourierXpress, which aims to automate courier operations such as booking, tracking, billing, and reporting.

This project provides students with hands-on experience in developing real-world applications using modern web technologies. Instead of focusing only on theory, the system allows students to implement practical solutions for real-life problems in the logistics industry.

The CourierXpress system is designed to support three main roles: Admin, Agent, and Customer. Each role has specific functionalities such as managing courier details, tracking shipments, handling billing processes, and generating reports.

Through this project, students will gain knowledge in database design, web development, system analysis, and application deployment. It also enhances problem-solving skills and prepares students for real-world IT environments.

Review 01

Design Plan: CourierXpress	Document Name: Problem Definition	SWD/Form No.01/PD/BVer1.0
Effective Date: 10/4/2026	Version 1.0	Page No: 3 of 36

Problem Definition

In today's logistics industry, courier services face challenges in managing shipments, customer information, and delivery tracking efficiently. Many companies still rely on manual processes, which lead to errors, delays, and inefficiencies.

CourierXpress is designed to solve these problems by providing a centralized web-based system that automates courier operations.

The system will provide the following functionalities:

- Manage courier bookings with sender and receiver details
- Track shipment status in real-time
- Manage customer and agent information
- Generate billing and invoices automatically
- Provide reports and analytic for decision making
- Send notifications to customers about shipment updates

User Roles:

1. Admin:

- Manage users, agents, and couriers
- Generate reports and analytic
- Control system operations

2. Agent:

- Handle courier bookings
- Update delivery status
- Manage branch-specific data

3. Customer:

- Register and login
- Track courier using tracking ID
- View shipment history

Design Plan: CourierXpress	Document Name: Customer Requirements Specifications	SWD/Form No.02/CRS/BVer1.0
Effective Date: 10/4/2026	Version 1.0	Page No: 4 of 36

Customer Requirements Specifications

I. CRS/Requirements Specifications

Category	Description
Inputs	Customer registration data; branch and agent data; shipment booking data; status update data; billing information.
Outputs	Tracking details; shipment receipts and bills; shipment status updates; simple branch reports.
Processes	Authentication, customer management, shipment booking, shipment tracking, billing generation, and basic reporting.
Hardware / Software	Windows 10 or higher, Internet connection, browser, PHP/Laravel or equivalent back-end, MySQL 8.0 or higher.

S.No	Customer Acceptance Criteria
1	Given Admin, when managing couriers, then the system allows add, update, delete, assign, and bill-view operations.
2	Given Agent, when booking a shipment, then the system automatically generates a tracking number and shipment receipt.
3	Given Agent, when updating status, then the shipment timeline and current status are updated correctly.
4	Given Customer, when entering a valid tracking number, then the system displays shipment details and status history.

II. Project Plan

- Client / Project Name: CourierXpress
- Project Duration: 08/04/2026 – 13/05/2026
- Vision / Objective: To design and develop a web-based courier management system that automates booking, tracking, billing, and basic operational management.
- Scope: Admin, Agent, and Customer modules; shipment management; billing; status tracking; and basic branch handling.
- Dependencies: Internet connection, VS Code, PHP/Laravel, MySQL, and modern web browsers.

Review 02

Design Plan: CourierXpress	Document Name: Data Flow Diagram	SWD/Form No.03DFD/Ver1.0
Effective Date: 10/4/2026	Version 1.0	Page No: 7 of 36

Data Flow Diagram

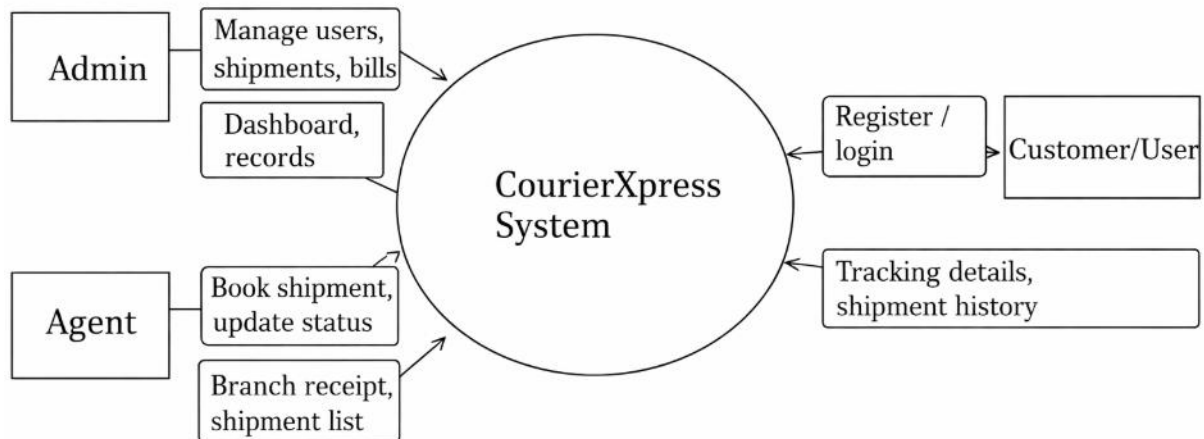

Figure 1. DFD Level 0

The Level 0 DFD presents the interaction between Admin, Agent, and Customer/User with the central CourierXpress system. It summarizes the high-level flows for management, booking, tracking, and billing.

A. Table Design

1.1.1 Table: branches

Field	Data Type	Key	Description
branch_id	BIGINT	PK	Branch identification
branch_code	VARCHAR(20)	Unique	Branch code
branch_name	VARCHAR(100)		Branch name
city	VARCHAR(100)		Branch city
status	VARCHAR(20)		Branch status

1.1.2 Table: users

Field	Data Type	Key	Description
user_id	BIGINT	PK	User identification
username	VARCHAR(50)	Unique	Login username
password_hash	VARCHAR(255)		Encrypted password
role	ENUM		ADMIN / AGENT / CUSTOMER
branch_id	BIGINT	FK	Assigned branch

1.1.3 Table: customers

Field	Data Type	Key	Description
customer_id	BIGINT	PK	Customer identification
user_id	BIGINT	FK	Linked account
customer_code	VARCHAR(20)	Unique	Customer code
full_name	VARCHAR(100)		Customer full name
phone	VARCHAR(20)		Contact number

1.1.4 Table: shipment_types

Field	Data Type	Key	Description
shipment_type_id	BIGINT	PK	Shipment type identification
type_name	VARCHAR(50)		Type name
base_rate	DECIMAL(12,2)		Base rate for pricing

1.1.5 Table: shipments

Field	Data Type	Key	Description
shipment_id	BIGINT	PK	Shipment identification
tracking_number	VARCHAR(50)	Unique	Tracking number
sender_customer_id	BIGINT	FK	Sender customer
receiver_customer_id	BIGINT	FK	Receiver customer
shipment_type_id	BIGINT	FK	Shipment type
origin_branch_id	BIGINT	FK	Origin branch
